Kontur

Ghost

Dots

## Vibia's new collection

### Kontur, Ghost, Dots

Among Vibia's latest creations are three designs that embody its philosophy of understated elegance and immersive lighting. With whimsical names that echo their thematic essence, these creations look the way they sound.

The first of these is Kontur, a design by Sebastian Herkner that focuses on the contrast between bright and dark, interior and exterior, white light and black frame. The collection boasts silhouetted diffusers and reflectors that frame the linear light source in a playful balance, creating a soft ambiance. This minimalistic approach can bring spaces to life in a variety of vertical or horizontal setups, simultaneously filling the room and blending in. The simple reflector is ideal for a professional setting, such as a workplace or meeting room.

The second creation is Ghost, a luminaire designed to walk the line between ethereality and materiality, evanescence and presence.

Reminiscent of the grand lights that once graced entryways and living areas, the Ghost collection is both a luminous form and a bright memory, radiating a warm, familiar glow that feels like home. In white, burgundy or amber, on a table or hanging from a ceiling, its sculptural shape commands the space with its organic elegance. The third and last design is quirkily called Dots, a collection of small wall sconces in the form of circular dots that serve as both lighting and decorative notes in a visual melody of shapes, textures, lights and colors. Featuring a range of radial and beam lamps, Dots can be used in an infinitely creative number of compositions, creating truly personalized spaces with diverse functionality: directional light for style, ambient light for atmosphere, and accent lighting for reading. Together, these three designs are bringing a touch of whimsy into our interiors.

# Beauty is on the inside

## A unique endeavor

As a lighting supplier, Lumiere Group joined forces with Hilights on a once-in-a-lifetime residential project that featured novel challenges to overcome. The Hilights team designed a full-fledged integrated lighting system with innovative elements and a unique flair for the upscale private residence. The client's peculiar vision took insight and knowhow to translate into a harmonious ensemble, an arrangement of interlocked spaces.

From a wide-open living room to a small private chapel, unique, customized fixtures have been built into the surrounding architecture, lending a composition of light tailored to each space. Thus, the big living room features track lighting embedded into the ceiling that serves both general and directional purposes, as well as smaller luminaires integrated into the wall-to-wall shelf cabinets, the contrast of lit and unlit shelves creating a patchwork effect. The smaller living room boasts the same ceiling lights, as well as similar linear lighting built into its bookshelves. Discreet lamps complete the picture in both settings, playing on the tones of the surrounding furniture.

The same wood, grey, black and white colors dominate the entrance hall, their sheen highlighted by identical ceiling lights, in addition to those embedded in the walls that serve as framing to two mosaic art pieces. The same linear lights can be found illuminating each step of the stairs that lead up to the bedrooms. The first of these incorporates luminaires with a more whitish glow that run along the ceiling as well as the back wall in symmetrical patterns. This intimate radiance can be found in the second bedroom as well, where the lighting is built into wooden beams that run along the diagonal ceiling and into the wall, providing a more diffuse light.

The most unique part of the project is the small chapel, lit by a bevy of directional lights that add a visual, almost dramatic flair to the space. But the central and most peculiar piece of the entire project is the large cross cut into the wall behind the altar and backlit with a warm light that fills the room with its atmospheric presence. This fixture crystallizes the unique demands and solutions that came together to produce a truly personal home.

## UNStudio x Delta Light

### Turning spaces into experiences with Soliscape

UNStudio and Delta Light have combined their expertise and flair to produce a revolution in indoor lifestyles: Soliscape, a versatile light and acoustic system made to promote wellbeing and belonging. In a rapidly changing workplace that is more and more focused on nurturing its human resources and talent, Soliscape offers a smart solution that leverages cutting-edge technology to humanize spaces.

The system is centered on the user and is therefore carefully calibrated to create a welcoming environment tailored to the complex needs of the modern worker. This not only boosts productivity in offices, ensuring optimal conditions for the ever-shifting demands of work, but even serves as a one-size-fits-all solution for other sectors as well, allowing a wide range of applications in retail, public spaces, the hospitality industry, and more.

Thanks to its hybrid functions, Soliscape provides a flexible toolbox of components and modules that enables designers and architects to seamlessly blend lighting and acoustics into the atmospheric theme of each space, transforming it into a vibrant interior landscape. Every room is intuitively brought to life in harmony with its functionality and is responsive to behavior in a way that lets it dynamically adapt the environment to the people within. The modular elements and positioning allow Soliscape to organically be customized for any activity; light shifts in accordance with the mood, the time of day, and even the personality of individuals

or groups. It can enhance specific elements of the interior both visually and acoustically, as well as fluidly enhance the overall atmosphere to the rhythm of the users' lifestyle. The Soliscape system comes with spot, direct and indirect linear lighting elements, featuring Delta Light's Melanopic Light Technology®.

Soliscape is an all-encompassing system that brings affordability, efficiency and sustainability to the table. Its diverse functions make it into a unified solution that reduces cost and waste, and its highly adaptive components make use of recycled materials for an even eco-friendlier footprint. Improving both the wellbeing of its users as well as the overall energy-efficiency of the building itself, Soliscape is the system of the future. As Ben Van Berkel, founder and principal architect of UNStudio puts it: "The way we work, live and relax is changing. This new hybrid world is causing architects and designers to rethink how we design our cities and buildings, so we can create places that encourage health and wellbeing." The creation of Soliscape marks a milestone in the design evolution of both UNStudio and Delta Light, whose convergence of aesthetic and functional philosophies have produced an insightful, future-proof product that is set to spark new trends in the industry. The two multidisciplinary teams have turned the tables on traditional design with their human-centric approach that fully embraces the core purpose of their craft: to mold the space around us into a truly engaging experience.
